

# Pressure System Accessories

## Pressure Bell

CSI Pressure Systems come standard with a pressure bell, but spare pressure bells are available.  
**List Price \$100.00**

## Poly Tubing

CSI Pressure Systems come standard with 50ft of heavy duty, non-kink 1/4" O.D. X 1/8" I.D. Polyurethane interconnect tubing, however, the pressure system is approved with up to 200ft of tubing. This is the only tubing that has been tested and approved by CSI. If your system requires more tubing just give us a call.  
**List Price \$0.70 per foot**

## Coupler Fitting

When using additional tubing or if an installation requires cutting the pressure tubing CSI offers an approved fitting to properly splice the two pieces together. Just remember anytime a fitting is used it is important that the tubing slides in a full 5/8 of an inch to prevent air leaks. CSI recommends marking 5/8" on the tubing to make sure it is completely inserted.  
**List Price \$2.08**

## Pressure Bell Mounting Options

### Mounting Bracket

### PBMB

The mounting bracket option for mounting the CSI Pressure Bell is the most common type of installation, but requires a length of PVC pipe and a 2" male adaptor to complete the installation. The installer mounts the bracket to the side of the basin, cuts the pipe to the appropriate length and attaches the male adaptor to one end of the pipe. The side with the adaptor then threads into the top of the pressure bell. The pressure tubing is run up through the pipe and the bell is then suspended by hand tightening the thumb screws securing the pipe in the bracket. (See installation drawing on page 9)  
**List Price \$45.00**

### Tether Kit

### PBTK

The tether kit option for mounting the pressure bell simplifies pressure bell installation. The two 4 lb donut weights simply slide over the top of the pressure bell and the nipple is threaded into the top. The weighted pressure bell is then suspended into the basin using the poly rope securing one end of the rope to the bolt in the nipple on the top of the pressure bell and the other end of the rope near the top of the basin with access from the manhole cover. **List Price \$55.00**
